About Me

As a final-year Information Systems and Technologies student at the Faculty of Organizational Sciences, University of Belgrade, I have three more exams left until graduation. I'm primarily focused on Software Engineering - I like figuring out complex problems and turning them into something that actually works. Outside of coursework, I'm always trying out new technologies to build something practical and useful.

Education

Faculty of Organizational Sciences, University of Belgrade

2022 – present

Major: Information Systems and Technologies

Projects

- **ObstaRace** Feb 2026
Full-stack application with 4-layer architecture using .NET 10 and React, featuring JWT authentication with HttpOnly cookies, email verification with a 5-minute link expiration rule and resend functionality, background services for automated notifications, and AWS S3 storage for profile images. [GitHub Link](#)
- **Apartment Rental Tracking System** Oct 2025
Desktop C# application with client-server architecture designed for automating tenant and lease contract records. The project focuses on complex business data validation, multi-user access, and efficient SQL Server database management through CRUD operations. [GitHub Link](#)
- **File Classifier CLI Tool** Jul 2026
Command Line Interface .NET tool for scanning and organizing files into directories based on file extensions (.exe, .docx, .jpg...). Files are organized into four categories (Executables, Documentation, Images and Unknown for uncategorized files). The tool was developed without any external packages to provide maximum performance.
